

Overview

The Fund combines thematic and systematic investment strategies aimed at generating long-term positive returns. The broad asset class exposure ranges from stock indices and government bonds to real assets, equity derivatives and high yield corporate bonds. The team employs stringent risk analysis and stop loss positions to provide downside protection.

Performance - Past performance is not a guide to future performance

Class B returns are used to illustrate the fund's longest track record and has no fixed management fee. It requires a separate agreement with Sanlam FOUR and is not available to retail clients. Class A is available to retail clients with a 0.75% p.a. management fee, which would result in lower performance than shown. Please see table below for the effect of these charges on performance. **Please see the table overleaf for all available share classes and total fees, or contact us for details.**

B USD Accumulation	6.0	9.6	0.5	2.6	-

The Fund has holdings which are denominated in currencies other than sterling and may be affected by movements in exchange rates. Consequently the value of an investment may rise or fall in line with the exchange rates. The fund can invest in derivatives. Derivatives are used to protect against fluctuations in currencies, credit risk and interests rates or for investment purposes. There is a risk that losses could be made on derivative positions or that the counterparties could fail to complete on transactions. The Fund's expenses are charged to capital. This has the effect of increasing dividends while constraining capital appreciation. Part of the fund is invested in bonds. The government or company issuer of a bond might not be able to repay either the interest or the original loan amount and therefore default on the debt. This would affect the credit rating of the bond and, in turn, the value of the fund. Investment in bonds and other debt instruments (including related derivatives) is subject to interest rate risk. If long-term interest rates rise, the value of your shares is likely to fall.

The value of this portfolio is subject to fluctuation and past performance is not necessarily a guide to future performance. The performance is calculated for the portfolio and the actual individual investor performance will differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. All terms exclude costs. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Do remember that the value of participatory interests or the investment and the income generated from them may go down as well as up and is not guaranteed, therefore, you may not get back the amount originally invested and potentially risk total loss of capital. Therefore, the Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The Manager has the right to close any Portfolios to new investors to manage them more efficiently in accordance with their mandates. Collective Investment Schemes are traded at ruling prices and can engage in borrowing and scrip lending. Collective Investment Schemes (CIS) are generally medium to long term investments. A schedule of fees and charges and maximum commissions is available on request free of charge from the Manager, the Investment Manager or at www.sanlam.ie.

Monthly Commentary

We have exposure to three equity markets in the growth momentum strategy. Elsewhere, we are active in seven areas; Synthetic equity options, Global Infrastructure, Renewables, Property, Active Alpha, Corporate Bonds (short dated) and Government Bonds. We hold downside hedges in the form of put options and employ long dated call options to hedge the upside.

After a difficult first quarter markets regained their composure with gains across the board. The month started with lingering trade war fears but was helped by a softening in president Trump's stance on China, and unexpected events in Korea, ending on a more positive note. Aided by a weak pound and corporate activity in a number of blue-chips, the FTSE 100 gained 6.8% whilst the MSCI World Index rose 1.2%. The yield on ten year US government bonds went above 3% for the first time since the end of 2013.

The Multi-Strategy Fund saw positive contributions from synthetic equity, infrastructure, property, investment grade and high yield bonds. Mid-cap alpha and hedge positions were negative, but overall it was a very solid month across the portfolio.

The backdrop of rising interest rates and political uncertainty remains, but as we head into summer, markets look to have stabilised. The positioning of the Fund is unchanged with a balance of diversified long-term income producing investments and option based equity exposure (including portfolio hedging) that allows us to participate when we can and defend when we need to.
