

# Sanlam Global High Quality Fund

April 2019 | Factsheet

## Overview

The Fund is an actively managed portfolio of global equities with a high quality bias, high conviction and benchmark agnostic, with sector and regional positioning driven by bottom-up stock selection. The investment process is unconstrained seeking to invest in companies with predictable revenue growth that produces sustainable economic value.

## Performance – past performance is not a guide to future performance

Class C returns are used to illustrate the fund's longest track record and it is a restricted share class per the fund information table on the next page. It is not available to retail clients. Class I is available to retail clients with a 0.75% p.a. management fee, which would result in lower performance than shown. Please see table below for the effect of these charges on performance. Please see the table overleaf for other available share classes and total fees, or contact us for details.

The Fund may invest in companies based in emerging markets which may involve additional risks not typically associated with other more established markets such as increased risk of social, economic and political uncertainty. The Fund has holdings which are denominated in currencies other than sterling and may be affected by movements in exchange rates. Consequently the value of an investment may rise or fall in line with the exchange rates.

The value of this portfolio is subject to fluctuation and past performance is not necessarily a guide to future performance. The performance is calculated for the portfolio and the actual individual investor performance will differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. All terms exclude costs. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Do remember that the value of participatory interests or the investment and income generated from them may go down as well as up and is not guaranteed, therefore, you may not get back the amount originally invested and potentially risk total loss of capital. Therefore, the Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The Yield is calculated on historic dividend income from the preceding 12 months. Since the yield is based on past information it is provided as a guide and should not be taken as a guaranteed yield. If fees are charged to the capital account then this could reduce the amount invested. Income may fluctuate in accordance with market conditions and taxation arrangements. The Manager has the right to close any Portfolios to new investors to manage them more efficiently in accordance with their mandates. Collective Investment Schemes are traded at ruling prices and can engage in borrowing and scrip lending. Collective Investment Schemes (CIS) are generally medium to long term investments. A schedule of fees and charges and maximum commissions is available on request free of charge from the Manager, the Investment Manager or at [www.sanlam.ie](http://www.sanlam.ie).

## Monthly commentary

The Sanlam Global High Quality Fund outperformed the MSCI World Index during the month by 0.5%, with the fund gaining 3.7%.

Facebook was this month's best performer (+15.6%) as the company continued its run of posting strong results despite the overhang of regulatory oversight. The company is transitioning advertisers onto the Stories format which the company believe is the future of customer use. This transition is actually a revenue growth headwind as the Stories advertising cost is lower for the advertiser. However given that revenue growth for Q1 was 26% (inclusive of an FX hit of 4%) you would be forgiven for thinking otherwise. With payments, e-commerce and dating still in its infancy, we remain confident that Facebook still has a long runway of growth ahead. The company also decided to book a potential \$3 billion fine for their part in the Cambridge Analytica scandal. The actual fine is yet to be decided upon. Without this hit to the operating line the company's margin would have been 42%, far in excess of the 36% that was expected by analysts.

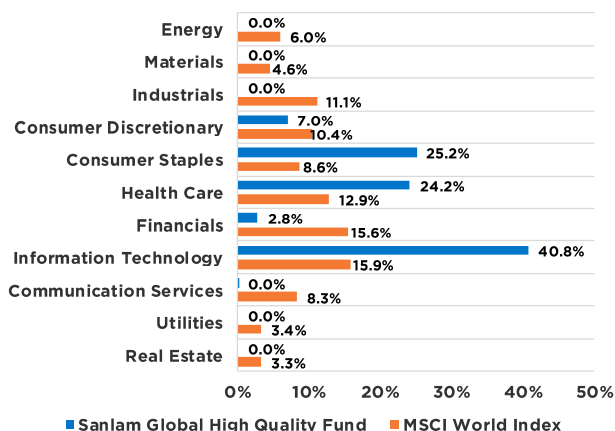

Other strong performers during the month were Microsoft (+10.3%) and Bayer (+7.4%). Both companies posted better than expected results as individual investment theses continue to play out. Imperial Brands (-7.2%) and British American Tobacco (-6.4%) were poor performers off the back of worse-than-expected volume performance, especially in the US.

During the month we completely sold out of our position in NetEase. The stock is up 50% from its September 2018 lows where we added to the position after fears of a regulatory stalemate with regards to game monetisation approvals in China appeared to us overblown. We fear that, going forward, the fast-growing loss-making e-commerce division will continue to hinder margins and for this reason we decided to exit.
